Subject: SIIA 2024 CODiE Awards Judge

To Whom it May Concern:

I am writing to confirm the review activities of Kartik Khosa on behalf of the SIIA CODiE Awards of 2024. The Software & Information Industry Association is the voice for the specialized information industry and associations. Our members provide the critical data, content and information that drives the global economy, informs financial networks, connects learners and educators, and produces better health outcomes. SIIA unites, defends and promotes the diverse companies and associations that comprise our membership. Our educational and networking opportunities, conferences, research, government affairs advocacy, IP protection services and certification programs help you grow your business, career and the industry at large.

SIIA operates the annual CODiE Awards recognizing thousands of education and business technology companies, products and services as leaders in innovation and excellence. The peer-recognized program has continued to evolve with the technology it honors, showcasing the most leading-edge products and innovative business technology of the time. To be considered for a CODiE Award, a business or product must be nominated by a peer, then go through a first round of peer review from experts in the field and respective subject matters to determine CODiE Award finalists. From there, the finalists go through a second round of peer review from community leaders and SIIA members. Winners are announced after this final review period at a virtual celebration.

CODiE Awards judges represent education and business technology leaders looking to learn more about top technology products and leadership within the industry. They are amongst a handful of eminent educators, product leaders & technologists in business technology categories that were chosen to be a judge this year.

Kartik Khosa was selected as a reviewer and judge for the CODiE Awards 2024 based on expertise and proven authority in the field of technology. They were to evaluate products in a couple of technical categories after going through virtual product demo sessions.

We are grateful for these contributions as a valuable judge of the work of others in the field.

Sincerely,

Sonya Roccia
